Independent dimensions for energy LLM security evidence

Classification record: surface | mechanism | control | authority | consequence; evidence

Surface S	Mechanism M	Attacker control C	Authority A	Consequence K
Model / artifact	Instruction redirection	Query-only access	A0: advisory answer	Task / answer failure
User / retrieved input	Numerical corruption	Content insertion	A1: sandbox / simulation	Privacy disclosure
Numerical data	Poisoning / backdoor	Tool / server control	A2: operational proposal	Financial error
Tool metadata / output	Disclosure	Training / artifact control	A3: real execution	Physical violation
Human workflow	Non-adversarial error	No adversary / NR	Code evaluated authority	Service / equipment impact

Evidence E: conceptual (E0) | text (E1) | tools (E2) | physics simulation (E3) | operation (E4)

Record measured and possible consequences separately. Evidence codes describe test outcomes, not study quality.
Multiple codes are allowed; NR = not recorded / not established. This framework is a survey synthesis.
